CLOVER — TIMOTHY

WE take great pride in the fact that we are able to offer the very best grades of Timothy, Clover and Alfalfa seed that it is possible to secure. Since our Timothy carries a 99.60% to 99.85% purity test, and is selected for good color and size and also high germination, you are getting seed of A No. 1 quality in every respect. Our Clovers and Alfalfa, being grown in the Northern sections, have proven to be very hardy and will produce maximum yields. All of our seeds are recleaned over special machinery. Ask us for sample—then make a comparison with others.

Don't buy cheap seed. Watch the germination on your seed as well as the purity. Every bag of our seed has a tag on stating exact purity and germination.

SEED OATS — ALBERTA CLUSTER

One of the heaviest yielding oats we have been able to find — yielding as many as 85 bushels per acre. A cluster oat borne on long, stiff straws. We bring in our seed from Canada and know that it is good, hardy stock.

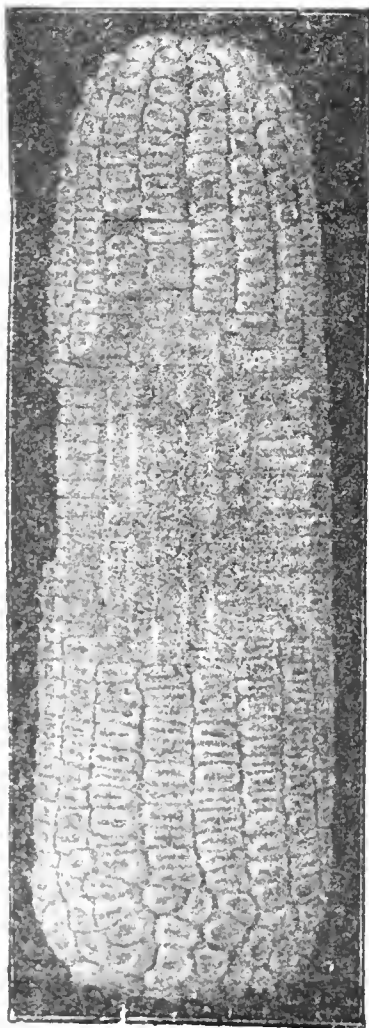

ALPHA BARLEY

This variety was originated at Cornell Agricultural College and the best seed is grown near there in Cayuga County, where we secure our supply.

This is a two-row barley with long heads and large, plump, heavy grain. The best variety to raise with oats, as it matures at the same time.

METCALF'S PERFECT ENSILAGE CORN

METCALF'S Perfect Ensilage is the greatest ensilage corn today. Selecting your variety of Ensilage Corn is a big and difficult problem these days. It is hard to find a corn that will do for husking and also make a perfect ensilage corn, but in the variety of corn that we sell under the name of Metcalf's Perfect Ensilage Corn we know we have found one.

WEST BRANCH SWEEPSTAKES

This is an ensilage corn that will ripen in most any ordinary season and will make the heaviest possible growth of stalks, foliage and grain. Dairymen like the ensilage made from this corn because it is very rich on account of having so many ears of corn in it.

LONGFELLOW YELLOW FLINT

The standard and best known of the Yellow Flints, one of the best of all Flint varieties; the stalk is of good height and extremely resistant to adverse weather conditions; ears are long, eight-rowed, maturing in ninety days.

CORNELL NO. 11

A newer variety of Dent Corn, which is fast becoming one of the most popular in this territory; the early short, medium deep kernel, with smooth rounded cap, often shows a tendency to run to deep orange and is said to possess high feeding qualities; matures in about ninety days.

PRIDE OF THE NORTH

Possibly the oldest and best known of the ninety-day Dent Corn, and still one of the most popular over a widespread territory.

LANCASTER COUNTY SURE CROP

This is an ensilage corn that grows tall, has very heavy foliage and develops ears early. The ears are very long and the corn is a reddish yellow color when shelled. Matures in about a hundred days.
